

Abdelaziz Abdelmonem Mohamed

Junior Penetration Tester | Ethical Hacker

Giza, Egypt • +201026123287 • abdelazizmohmed68@gmail.com • [Portfolio](#) • [LinkedIn](#) • [GitHub](#)

OBJECTIVE

CEH, eWPTX, and eMAPT certified Junior Penetration Tester and Ethical Hacker with practical experience in web and network security assessments. Holding dual B.S. degrees in Cyber Security. Adept at leveraging industry-standard tools (Burp Suite, Nmap, Metasploit) for manual exploitation, alongside Python for secure software development, applied cryptography, and automated reconnaissance to protect enterprise digital assets.

INTERNSHIPS

Network Security Trainee | National Telecommunication Institute (NTI) Sep 2026 - Oct 2026

- Conducted hands-on vulnerability assessments on simulated enterprise network environments, identifying misconfigurations and weaknesses across routers, switches, and endpoint systems.
- Configured and tested firewall rule sets and access control policies to enforce network segmentation and restrict unauthorized traffic in alignment with security best practices.
- Performed network traffic analysis using Wireshark and Nmap to detect anomalies, map attack surfaces, and support penetration testing exercises on internal infrastructure.

Web Application Penetration Tester Trainee | Arab Open University (AOU) Dec 2024 - May 2025

- Performed security assessments on web applications to identify vulnerabilities including SQL Injection, XSS, and Broken Authentication.
- Utilized Burp Suite and manual testing techniques to bypass security controls and document findings.
- Collaborated with development teams to provide remediation strategies based on the OWASP framework.
- Drafted detailed technical remediation reports addressing OWASP Top 10 vulnerabilities (including SQLI, XSS, and IDOR) for development teams.

PROJECTS

Egyxos - Enterprise Password Manager | Secure Local-First Desktop App [View on GitHub](#)

- Architected and developed a secure desktop password manager using Python and CustomTkinter, featuring local AES encryption via Fernet (PBKDF2HMAC with SHA-256) and isolated SQLite3 storage.
- Integrated Have I Been Pwned (HIBP) API breach checking utilizing k-anonymity (SHA-1 hash range queries) with asynchronous threading to prevent UI freezing during security audits.

Egyxos Scanner | Automated Security Reconnaissance & Vulnerability Tool [View on GitHub](#)

- Architected a custom Python-based automation tool to streamline the security assessment lifecycle, integrating subdomain enumeration with automated vulnerability discovery.
- Engineered modules to detect common web-based vulnerabilities (SQLI, SSRF, XSS) across large attack surfaces, significantly reducing manual reconnaissance time by up to 40%.

TECHNICAL SKILLS

- **Security Tools:** Burp Suite, Nmap, Metasploit, Wireshark, SQLmap, Nessus, Nuclei, Subfinder.
- **Programming & Scripting:** Python, Java, Bash.
- **Core Competencies:** OWASP Top 10, Network Security, Vulnerability Assessment, Ethical Hacking, Linux (Kali), Secure Software Development.
- **Networking:** Routing & Switching, TCP/IP, VPNs, Firewall Configuration.

CERTIFICATIONS

- Certified Ethical Hacker (CEH) - EC-Council
- eLearnSecurity Web Application Penetration Tester eXtreme (eWPTX) - eLearnSecurity
- eLearnSecurity Mobile Application Penetration Tester (eMAPT) - eLearnSecurity

EDUCATION

Dual Bachelor of Science in Cyber Security 2027

- The Open University - UK
- Arab Open University - Egypt

LANGUAGES

Arabic: Native | English: B2 - Professional Working Proficiency
